

Following my telephone conversation with James from Smith of Derby, I have today received their proposals for the town clock.

We discussed 2 options, the first to refurbish the clock in its current location, The second to have the clock taken down, refurbished and relocated on a post.

The proposal attached shows both options - this is the summary

*Option 1 - Supply & Install 2 motors and ARU. £2,957*

*Option 2 - Clock refurbishment / new clock and installation on fabricated post. £12,208*

*Please note that in the event of any further unexpected work being identified, this will form a separate quotation and the work will not be undertaken without approval. Please see 'Important Notes' below, which should be read in conjunction with this proposal.*

Smith of Derby have also indicated that the clock should have an annual service, this is a service they offer at £254 per year currently.

I am assuming this info will need to be shared at ER&TD in March but if you would like to me circulate in advance of the meeting or raise any questions please let me know.

Cheers
