

Thanks for your reply and please raise the problem at the P and T committee meeting. For information, the tipper and ready mix trucks are using the longer route to the building site; my fear is that the original construction consists of concrete slabs and there is the ever present danger that these will be damaged in a similar fashion to the existing broken slab. This possibility on its own, should have galvanised ESCC Highways into action to prevent further damage and disruption.

I have sent copies to James Kelly, Highways, Kathryn Field and Hazel, plus a two of residents.
Kind regards,
John.
